LANDY

HIGH PRESSURE WASHERS

TURBO LANCE

The Turbo Lance turns any pressure washer into a tool very useful for shifting dried on mud, manure or concrete splashes.

The nozzle produces a pencil jet which rotates at a phenomenal speed to give the effective coverage of that of a fan jet nozzle. The extra concentration produced by this pencil jet will rip through dried on

deposits, ideal for use on concrete floors and galvanised steelwork, but be careful, this nozzle will damage wood, paint work, concrete blocks, tarmac and is a definite no for washing wellies!!

The nozzle is usually supplied complete with it's own lance. In most circumstances the turbo nozzle will not be in permanent use, so a quick change coupling to swap from ordinary jet to turbo nozzle is fitted on the trigger outlet.
