**HIGH PRESSURE WASHERS**

# The Landy P.T.O

Consistently popular, the P.T.O model has been continually developed and enhanced. We now have eight standard versions all of which utilize the same model of pump which has three crank driven

pistons with very hard wearing ceramic sleeves, stainless steel unitised valves and a brass cylinder head. The pump is directly driven from the

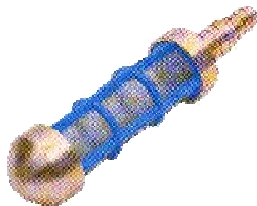

P.T.O drive on the tractor.

Designed with power and simplicity in mind, our P.T.O range of power washers are constructed on a universal, robust, tubular frame with stove enamelled finish which is easily mounted to the three point linkage of agricultural tractors.

Best suited to situations where the use of electrical equipment is not appropriate, the P.T.O. has the powerful cleaning force required for any task at a fraction of cost of an engine powered washer of similar output. All models are equipped with a suction hose and filter enabling them to draw the water they require from a bowser, tank or other

reservoir source. All models are supplied complete with p.t.o. shaft, 4m suction hose/filter and bypass return pipe.
